

ABSTRACT OF THE DISCLOSURE

A roof rack includes a pair of roof rails extended in parallel each other and connected to a roof of a vehicle, a cross rail extended perpendicular to the roof rail for connecting the roof rails, and a stopper mechanism including a handle operable for fixing the cross rail to the roof rails. The cross rail is movable relative to the roof rail when the handle is at a first position and the cross rail is immovable relative to the roof rail when the handle is at a second position.
